

## BRIEF HISTORY OF THE CANADIAN DOLLAR

This summary provides a perspective of the modern-day history of Canadian-US dollar exchange rate fluctuations, recognizing the recent decline in the Canadian dollar. Chart 1 shows the level of exchange rates from 1953 to January 2016.

1953-  
1960

The Canadian dollar spent much of 1953 to 1960 in the \$1.02 to \$1.06 (US) range. It topped out at \$1.0614 (US) on August 20, 1957. Until 2007 this was considered the modern-day peak for the Canadian dollar versus the US currency. The Canadian dollar was at \$2.78 (US) in 1864 during the US Civil War, but in those days it was pegged to the gold standard, a practice the US had already abandoned.

1961-  
1969

In the early 1960s, the Bank of Canada governor James Coyne and Prime Minister John Diefenbaker were on different economic paths. The government wanted expansion while Coyne wanted to maintain a tight money supply. Coyne subsequently resigned and in May 1962, the government pegged the Canadian dollar at 92.5 cents (US) plus or minus a 1% band.

1970-  
1972

In May 1970, with rising inflation and serious wage pressures, the Trudeau government allowed the Canadian dollar to float. It drifted to parity with the US dollar by 1972.

A vertical timeline on the left side of the page, consisting of a light green ribbon with ten orange circular markers. Each marker contains a year or year range. To the right of each marker is a corresponding text block describing a significant event in the history of the Canadian dollar.

1974

On April 24, 1974 the Canadian dollar reached \$1.0443 (US). This was the high point for the dollar from when it entered its most recent float period and would not trade at these levels again for another 30 years.

1976-  
1986

In November 1976, René Lévesque became Premier of Quebec with a platform that promoted political independence for Quebec. A slide in the Canadian dollar resulted, lasting through the rest of the 1970s and the first half of the 1980s. This was a period characterized by rising inflation and interest rates. The Bank of Canada's key interest rate reached 21.2% in 1981, and the Canadian dollar hit an all-time low of 69.13 cents (US) on February 4, 1986.

1987-  
2001

The Canadian dollar rose through the latter part of the 1980s and early 1990s, and on November 4, 1991, reached 89.34 cents (US). This was the high point for the 1990s. Budget deficits, weaker commodity prices and the aftermath of the international crisis in 1998 in the emerging markets of Russia and Latin America, saw a downward path for the Canadian dollar.

2002

On January 21, 2002, the Canadian dollar hit its all-time low against the US dollar dropping to 61.79 cents (US). At this level it cost \$1.62 CDN to buy \$1 US.

2003-  
2006

Through 2003 to 2006, the Canadian dollar started to appreciate sharply driven by a robust global economy that boosted prices of Canada's commodity exports and pushed the Canadian dollar above 90 cents (US).

2007

On September 20, 2007, the Canadian dollar reached parity with the US dollar for the first time in close to 31 years, with a 62% rise in less than six years driven in part by record high prices for oil and other commodities. On November 7, 2007, the Canadian dollar briefly hit its modern-day intraday high of \$1.10 (US), but closed the day at \$1.0775 (US). The Canadian dollar was named the Canadian Newsmaker of the Year for 2007 by the Canadian edition of Time magazine.

2008-  
2009

The Canadian dollar continued to trade near parity in the first half of 2008, but then started a decline that saw it drop below 80 cents (US).

2010

After a strong bounce back, the Canadian dollar reached parity for the first time in 20 months in April 2010.

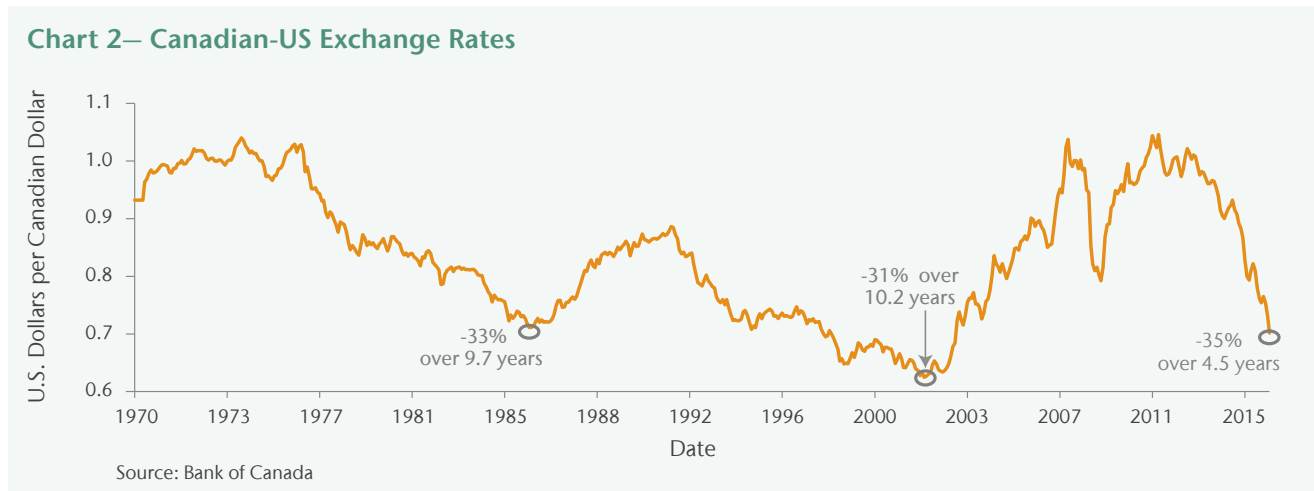

2011

At the height of the commodity boom, the Canadian dollar reached \$1.06 (US) on July 21, 2011. It then experienced its fastest decline in modern-day history as commodity prices rapidly deteriorated.

2016

The Canadian dollar fell to 68.68 cents (US) on January 19, 2016, approximately 7 cents (US) from its historic low, before starting to strengthen against the US dollar.

Chart 2 shows the history of exchange rates from 1970. It captures three modern-day major declines in the Canadian dollar versus the US dollar.

The Canadian dollar is down 35% from its peak of \$1.06 (US) in July 2011. This has been the fastest decline in its history and matches peak to trough declines seen in the last two bear markets in 1976-86 and 1991-2002. The speed of the decline is in part due to the swift collapse in oil prices.

There's no guarantee of the future direction of the Canadian dollar, but past declines would suggest the worst could be over. Only time will tell.
